

# Flash Test™

Test Currency in three ways

US Patent No. 10,475,270

## The Ink Test

1. Locate the silver sensor
2. With your middle finger over the word "STATES" on the BACK of the bill, glide the top front of the bill over the sensor where your fingertip is. When the sensor picks up the black ink, a green flash will appear in the white area, telling you that the bill is good!

## The Watermark Test

The watermark detector uses a powerful LED to reveal the presence or absence of the watermark that should appear in all genuine bills.

## The Security Thread Test

Use the built in UV light to easily detect security threads

## The Ink Test

US bills have special black ink on the front concentrated on the top as shown. Our unique sensor picks up this ink!

## The Security Thread Test

Use the UV light to locate security stripes. A convenient guide on the front of the unit show you the color and location for each denomination \$5 and higher.

## The Watermark Test

Use the LED light to locate watermarks. These should mirror the portrait in the center of the bill. (on the \$5, the numeral 5 appears, not an image of Lincoln)

Scan the QR Code for a quick training video!

# You've been given a counterfeit...Now what?

Once you've determined that you've received a counterfeit bill make sure to turn in the bill to your local police station or U.S. Secret Service field agency

You can locate the closest reporting agency by following the link below:

[www.uscurrency.gov/report-counterfeit](http://www.uscurrency.gov/report-counterfeit)

## Penalties for Counterfeiting U.S. Currency

Several of the provisions in the federal counterfeiting law provide for a fine of up to \$250,000 and a prison sentence of up to twenty years for the counterfeiting of U.S. obligations and securities.
